COMP3005 Term Project:

Database Summary:

The database that I have made is a World War 2 Tank database. The database contains the countries that were part of World War 2, the tanks that belonged to each of those countries including some information on the tanks and the specifications for the tanks. The database allows users to view the countries, tanks, and tank specification in a linear manner by clicking on the different links which will take them to the specific pages for each countries tanks and the specifications.

ER Model:

ER Table Schema:

[Primary Key Attributes | Non-Primary Key Attributes]

Country

[countryName | year_joined, axis, allied]

Tank_Country

[tankId, countryName]

Tank

[tankId | tankName, num_produced, type, country]

Tank_Specs

[tSpecId | sid, tankId]

Specs

[sid | armor, main_armament, secondary_armament, max_speed, propulsion, range, weight, crew]
